

"Mail has Arrived" Solution

and Mobile App Notification

With an increasing number of residents working from home, not everyone is checking the mail when they arrive home each night. And for many residents, daily mail arrival is an important event!

The Aware "Mail Has Arrived" solution provides real-time, app-based notifications to your residents, as soon as the mail is delivered.

Our simple sensor solution gives residents the information that they want immediately, through their mobile device, *with no need to ask building staff.*

Save your staff time and energy by automating Mail Has Arrived notifications. Building Managers can also receive notifications via email and view mail delivery events through the Aware dashboard in BuildingLink.

There is a very small cost to this solution, and a very big benefit to both residents and building managers!
