

Fitness Center (FC)

An informational digest for residents

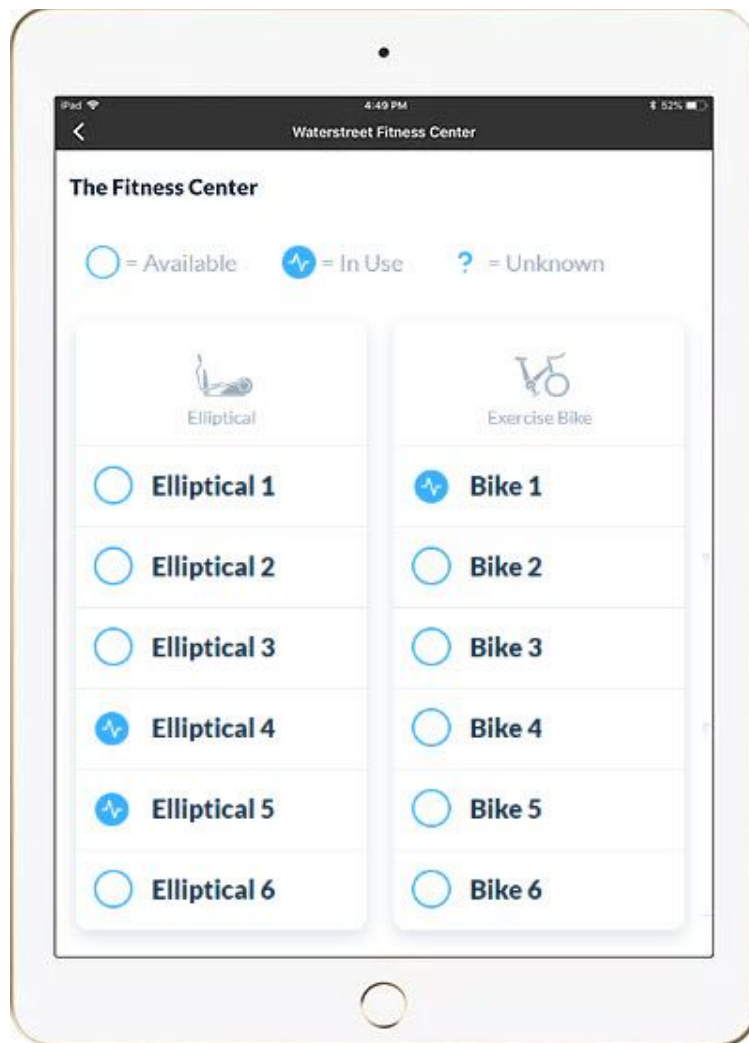

What is Aware-FC?

The Aware-FC solution is a fitness center management system that reports information to both residents and management via the hub and sensor(s) hardware (see equipment section below). As a resident with an Aware equipped fitness center, you will have access through our resident site or mobile app, to information regarding equipment use and availability, fitness sensor temperature and humidity, and overall gym activity.

[Watch the solution in action!](#)

Mobile app, desktop, and Amazon Alexa

Aware-FC is accessible through our resident mobile site, our resident app, *and* Amazon Echo devices!

By clicking on the Aware! icon in your BuildingLink mobile app, **you get real-time information on equipment use and availability.**

By asking your Amazon Echo device **“What’s going on in the gym”** or **“Is there a treadmill available?”** you get information, control, and convenience through simple voice command.

Know your gym from the comfort of your home with your building’s new Aware-FC sensor solution!

Coming Soon: Aware-FC for Google Home

What does the Aware-FC Equipment look like?

Hub

Sensors

Aware Fitness Center's hub acts as the collector of data. It receives information from the sensors, which are fixed to the equipment (1 sensor per piece of equipment) and then transmits that information to BuildingLink. We then parse the data and use that information to create visuals for you, the resident, to keep up with the details of your building's fitness center.
