

MOUNTING DOOR ACTIVITY SENSORS

Equipment needed:

- 1x S3 Sensor
- 1x Door Activity Magnet

Installation Procedures:

1. Peel off the red film from the VHB tape

- VHB Tape is pre-installed on both the Sensor Bracket and Door Activity Magnet.
- Please make sure that the surface is clean before mounting any of the equipment.

2. Attach the sensor to the Door Frame

- Install the sensor in a stationary location. The top of the door frame is ideal in most cases.
- You can also choose to attach the sensor to the side of the door frame.

*The sensor and door activity magnet works best if both the door and door frame are equally leveled.

3. Attach the Door Activity Magnet to the Door

- Ensure that the Door Activity Magnet is properly aligned to the sensor.
 - o There is an indent on the sensor and magnet that shows you when the magnet is aligned to the sensor.

4. Typical Installation Examples

A. On top of the door frame

B. To the side of the door frame

5. For Door Frames with Double Doors

- If the door frame has double doors, install one sensor on one door and magnet on the other.

- This ensures that no matter which one is opened, you will receive an alert that the door is open.
